## Important Information

This document has been issued for information purposes only. It does not contain any advice, investment recommendations or any offer, invitation or inducement to invest in the Company. Investors should seek advice from an authorised financial adviser prior to making investment decisions.

Capital may be at risk as the value of investments may go down as well as up and is not guaranteed; therefore investors may not get back the amount originally invested. Past performance is not a guide to future performance, nor a reliable indicator of future results or performance. Changes in the exchange rates between currencies may cause the value of investments to fluctuate. Investments in shares of smaller companies are generally considered to carry a higher degree of risk as the market for their shares may be less liquid than that for shares of larger companies, making shares of smaller companies more difficult to buy and sell.

The performance of shares of smaller companies may be more volatile than the shares of larger companies over short time periods; therefore investors should regard such investments as long term. There can be no guarantee that the investment objective of the Company will be achieved or provide the returns sought by the Company.

An investment in the Company is only suitable for investors who are capable of evaluating the merits and risks of such an investment and who have sufficient resources to be able to bear any losses which may arise from such an investment (which may be equal to the whole amount invested). Such an investment should be regarded as long term in nature and complementary to existing investments in a range of other financial assets and should not form a major part of an investment portfolio.

An investment trust is a public limited company, the shares of which are traded on the main market of the London Stock Exchange. Accordingly, the ability of shareholders to sell their shares will be dependent on the market price of the shares. The shares may trade at a discount or premium to their net asset value. Investment trusts may borrow money in order to make further investments. This is known as gearing. The effect of gearing can enhance returns to shareholders in rising markets but will have the opposite effect on returns in falling markets.

White Oak Capital Management Consultants LLP (India) does not provide retail investors with investment advice.
